1pc single spray head

1pc dual spray head

1pc fan shape blow head

1pc adjusting spray head

1pc connecting part

1pc rubber cap

1pc fastener for connecting part

2pc connecting rod

4pc seal ring

1pc glass sphere

4pc clips

1pc big rubber ring

**If any parts are missing or damaged, please contact your dealer.**

## 4 ADDITIONAL SAFETY INSTRUCTIONS FOR BACKPACK SPRAYER

- Never open the backpack sprayer or unscrew the sprayer handle when the backpack sprayer is still pressurised.
- Always release the pressure completely before opening the backpack sprayer by pressing the push button of the sprayer handle.

### 4.1 Cleaning

- After using your backpack sprayer, always release the pressure then empty, carefully clean and rinse the tank in clean water. Leave the backpack sprayer open and allow it to dry.
- Always clean the backpack sprayer before using a different product to avoid chemical reactions.

- To prevent reaction with the products you are using, never use aggressive cleaning agents that contain solvent or petrol.

#### **4.2 Operation**

▪ Check the backpack sprayer for possible damages before each use.  
Never leave your backpack sprayer unattended or for long periods when full and pressurised.

- Keep the backpack sprayer out of the reach of children.

You are responsible for the safety of others.

- Keep your backpack sprayer away from heat sources and hot environments.  
The tank cap is equipped with a pressure relief valve. This valve draws in air to equalise the pressure inside the tank and prevents liquid leaking out if the backpack sprayer falls over.

### **5 ASSEMBLY**

- Take the pump lever out of the packaging and insert it through the holes in the base of the tank.
- Push the locking clip to hold the lever in
- Fix the lever / pump connecting rod onto the top of the pump unit and the base of the pump lever.
- Use the washer provided and the split pin to connect the lever / pump connecting rod if supplied in this sprayer or push the lever into the fitting.
- Connect the rubber tube to the top of the tank and to the lance body.
- Connect the lance body to the lance tube and connect the spray nozzle to the end of the lance tube.
- Unscrew the tank filling cap, leaving the tank filter in place, and fill the tank with the correct spray volume for your application and then fill with the correct amount of water for your dilution, then screw the tank cap firmly in place. Shake the tank to ensure that the solution is well mixed.
- Adjust the straps on the sprayer to an approximate fitting position then put the sprayer onto your back and adjust the straps again until the tank sits as comfortably as possible on your back.
- Pump the handle of the pump lever approximately 6-8times to pressurize the tank.
- Point the nozzles of the lance at the plant to be sprayed and depress the lance lever and the spray will flow onto the plant, ensure you wet the plant well.
- When spraying in the wind the spray may be blown onto other plants not intended to be sprayed (= spray drift). It is best not to spray in strong windy conditions.

### **6 MAINTENANCE**

- After use empty out all and any spray left over and wash out the entire tank at least 3 times with clean water filling a fourth time and pressurising the tank and pumping the clean water out through the spray line hose and lance and nozzles. This must be done to prevent sludge forming in the remaining spray residue and blocking the spray line and so that the sprayer is clean for its next use.
- Store in a clean dry place out of the direct sunlight.
